

Sound level meter

Decibels explanation

What does 50-55 dB mean?

What does 50-55 dB mean?

At Fur Closet, we understand that optimal storage of fur coats is essential to ensure quality and longevity. This is why our Fur Closets are equipped with advanced temperature control. A common question we receive is how much noise this technology produces and whether this can be disruptive in certain rooms.

In our product sheets and on our website, we advise against installing the cabinets in bedrooms or dressings, as they generate a noise level of 50 to 55 decibels (dB). But what exactly does that mean?

Decibels in context

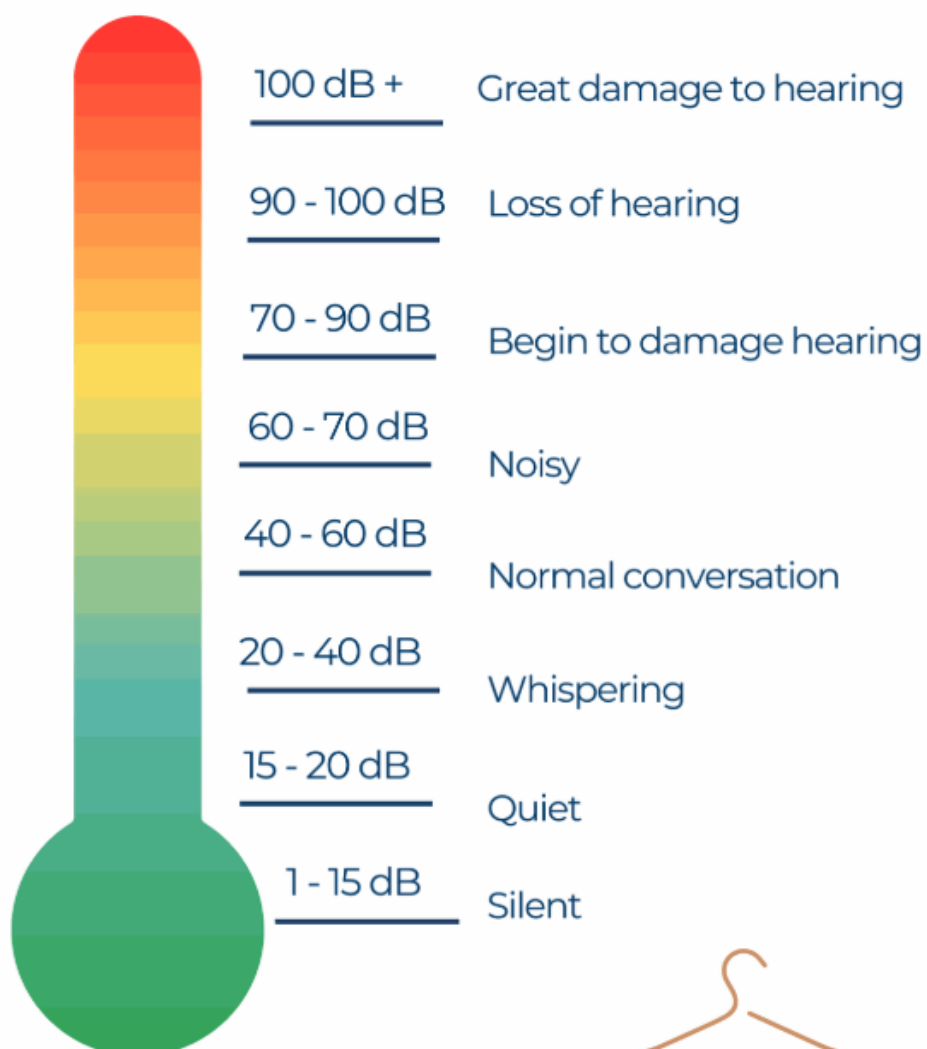

Decibel is a measure of sound intensity, with higher values indicating a louder sound. For comparison:

- 30 dB - whispers or soft background noise in a quiet room.
- **50 dB - a quiet office or a gently humming fridge.**
- **55 dB - a moderately loud conversation or the sound of a light rain shower.**

So a noise level of 50 to 55 dB is audible, but falls within the category of normal background noise. For some people, this noise is negligible, while others prefer to avoid it in rooms meant for quiet, such as a bedroom or dressing room.

Sound level meter

Want to find out how loud 50-55 dB feels in your environment? The Sound Level Meter app from the National Institute for Occupational Safety and Health (NIOSH) is a reliable and freely available tool for iOS devices. This app measures sound levels and helps users understand the impact of sound on hearing.

By taking the measurement at a distance of 25-30 cm (10-12 inches) from the sound source, you get an accurate indication of the actual sound level of an object such as our temperature-controlled cabinets.

The best placement for your Fur Closet cabinet

While temperature control is necessary for the optimal storage of your fur coats, we understand that noise plays a role in the choice of placement. We recommend placing the closet in a separate room, such as a storage room, laundry room or hallway, where the noise level will not impact your comfort.

With a Fur Closet cabinet, you are assured of the best care for your fur coats, with the highest possible attention to storage and ease of use. Would you like to know more or get personal advice on the best placement? Then get in touch with us!
